Educational Formation

- . 1st degree at Colégio da Sagrada Família
- . 2nd degree at Escola Técnica Federal de Pernambuco – Building Technician

Technical and free hand design, building material, composition, color, building systems, electrical installation planning, hydro-sanitary installation projecting, lightening planning were the main goals of the technical course for buildings which I followed with distinction in Recife-PE.

This technical course prepared me to start my professional life already in the middle school time, by developing in half period probations and trainings under the support of Students Service Office, by which I was selected for technical students job at Foundation for Historic Patrimony of Pernambuco State, Foundation for Development of Pernambuco State as well for other private enterprises who worked for those State firms and subcontractors for collecting of data and pre studies for urban plans and preparation of Urban Code in Recife-PE.

Architectural design and Interior design were also trained and experienced already during the Technical School, under supervision of Borsoi and Costa Architects which recruited students to support their projecting team.

. 3rd degree at Universidade Federal de Pernambuco – Brazil. Architect

Architectural Planning in the level of residential, commercial, industrial, medical, infrastructure, urban design, interior design, rural settlement. Final Diploma work was dedicated to Historic Patrimony and Revitalization of old Town Center-Recife/Pernambuco State-Brazil. This project studied the social relations, physical and urban settlement of particular area with social-political and economical problems and became basis for development of the project of Revitalization of this part of town, with support of Institute of Architect of Brazil, section of Pernambuco.

The study of world architecture history, art as economical world development with ethics and respect for nature and historic and ethnological patrimony was strongly developed by our masters. Technical design and disciplines, based on building materials, resistance and calculation of resistance were developed each semester.

Aesthetic and the feeling of rational use of space, composition and color, communication and psychology were studied from the first semester, preparing our group to deal with public and clients.

Other interdisciplinary disciplines and information were taken as extra curricular courses and practical probations and trainings which I personally did in private architectural ateliers and offices during the 5 years of study. This gave me practical experience in each field of architectural design and building system.

. Pos – Graduation – Actualization in Agro-Urban Planning by Universidade Federal Rural de Pernambuco – Brazil

This course was one 3 months pos-graduation training, with special sight on development of Urban design for improving of Agro Zones, especially designed for the undeveloped regions in Sertão (Draw and desert region) of Northeast of Brazil. SUDENE and DNOCS (governmental organs for development of Northeast of Brazil, today under re-organization) promotes the social development of rural region and new human conglomerates and supports with economical and technical help and the understanding of this process was one of the goals of this complementary

course. The program proposed understanding of social, economical and structural situations under interdisciplinary themes for development of Rural Settlement in non developed and under low development conditions.

The themes were developed proposing a comparative study among the systems proposed for Rural settlement in Northeast of Brazil, Israel and the European Rural organization.
